

SAFEEK S

SENIOR SOFTWARE ENGINEER

Coimbatore, India • +91 6384887010 • safeek70@gmail.com • linkedin.com/in/safeek • safeek-dev.github.io

SUMMARY

Senior Software Engineer with 9+ years of experience designing and building scalable, distributed backend systems using **Golang, JAVA, Node.js, Python, gRPC, REST APIs, MongoDB** and microservices. Hands-on experience with high-throughput, real-time systems built on **Redis Pub/Sub, MQTT, OCPP** and event-driven architectures, with strong ownership of production deployments, CI/CD, performance tuning and incident response. Delivered production platforms for JioBP, Magenta Mobility and Swiggy, with deep focus on backend scalability, low-latency communication, and end-to-end delivery.

TECHNICAL SKILLS

Languages:	Golang, JavaScript, TypeScript, Python, Java, Shell
Backend:	Node.js, gRPC, Protobuf, REST, Microservices, Distributed Systems, Event-Driven Architecture, System Design
Frontend:	React.js, Angular
Messaging & Real-Time:	Kafka, Redis Pub/Sub, MQTT, OCPP, WebSockets
Databases & Search:	MongoDB, Postgres, MySQL, Redis, Elasticsearch
Cloud & DevOps:	AWS, Docker, GitHub Actions, CI/CD, Linux, Git
Observability:	Prometheus, Grafana, OpenTelemetry, Kibana

WORK EXPERIENCE

Freelance Backend Consultant

May 2026 – Present

Binary Cube Technologies (Client: Truxel, Sweden)

Remote / Coimbatore, India

- Contributing to the backend of an energy grid stabilization platform built in **Python**, supporting real-time monitoring and control of distributed energy sites.
- Redesigning the platform's service topology from a per-site model (3 dedicated services per site) to a **shared multi-tenant model** (3 shared services across all sites) — reducing service duplication, simplifying deployment, and lowering operational overhead as new sites onboard.
- Working on backend services that process real-time energy telemetry and coordinate operations across distributed sites.

Senior Software Engineer

Nov 2024 – May 2026

Tata Elxsi / Tech Mahindra (Client: JioBP)

Remote / Coimbatore, India

- Designed and developed backend functionality for the JioBP EV charging platform using **Golang, Node.js**, and **Angular**, enabling operators to remotely trigger charger actions and manage charger configurations across the JioBP charging network.
- Optimized the OCPP service by introducing **Redis caching** and **Redis Pub/Sub** in Golang, **reducing message-handling latency by ~40%** and enabling real-time coordination across multiple service instances.
- Designed and shipped the **Auto-Charging feature**, automating the end-to-end charging workflow and significantly reducing manual operator intervention.
- Built distributed, real-time communication between backend services and hundreds of charging stations using **OCPP over WebSockets**.
- Owned UAT, QA, and Production server setup, deployments, and **CI/CD pipelines**, supporting automated, zero-downtime releases.
- Investigated and resolved production incidents across backend services, focusing on reliability, performance, and availability.

Golang Developer

Jan 2023 – Nov 2024

Magenta Mobility

Bengaluru, India

- Designed and developed scalable backend services in **Golang** and **MongoDB** for an EV fleet and charging management platform.
- Built an **OCPP log management system** to monitor high-volume, real-time transactions between charge points and the central management system.
- Delivered platform features using **Golang** and **React.js**, supporting daily operational workflows across the charging fleet.
- Built the Charge Grid Dashboard with reports and interactive visualizations in **React.js**, improving operational visibility across the fleet.
- Troubleshoot production incidents and optimized backend microservices to improve reliability and reduce operational overhead.

Senior Software Engineer

Jun 2017 – Dec 2022

OntoBorn Technologies

Coimbatore, India

Product engineering services company; worked across the following client engagements:

- **Swiggy — Online food delivery platform:** Built a **Golang-based gateway service** for CMS request/response processing; implemented low-latency **gRPC** service-to-service communication for internal microservices; set up **Prometheus** and **Grafana** monitoring with Docker-based deployments.
- **Essential Skills — Learning Management System (Ohio State University):** Developed online examination features (quizzes, timed tests) using **React.js**, **Golang APIs** and **MySQL**; investigated and optimized slow database queries, improving responsiveness under high concurrent load.
- **PoultryPro — SaaS Farm Management Platform:** Contributed to system architecture and core business logic; built backend APIs and business functionality using **Golang** and **MySQL**, with **React.js** on the frontend.

EDUCATION

B.E. Computer Science — Kgisl Institute of Technology

2013 – 2017 | Coimbatore, India
